

## ABSTRACT

A method for producing a worn article of the present invention comprises the steps of: successively placing portions of webs W1, W2 on a plurality of pads 3<sub>i</sub>; slacking off the webs W1, W2 between the pads 3<sub>i</sub> by shortening an interval between the pads 3<sub>i</sub>; placing an elastic member on the webs W1, W2 placed on the pads 3<sub>i</sub> so that the elastic member extends across a slack portion W<sub>a</sub> of each of the webs W1, W2 which is slacked off; placing an absorbent body on a non-slack portion W<sub>p</sub> of the webs W1, W2 on the pads 3<sub>i</sub> which is not slacked off; removing the slack of the webs W1, W2 by increasing the interval between the pads; and placing a sheet S1, S2 of a predetermined length on the webs W1, W2, the slack of which is removed.
